

Release of Liability

Release of Liability and Waiver of Claims

Health and Safety Assessment

In addition to the energy audit we will do on your home, we will also do a limited health and safety assessment of the home. The health and safety assessment will consist of a visual inspection for potential health and safety problems. You will be notified of any health and safety problems that are identified, including mold. However, the evaluator is not a qualified mold professional. Mold may be present in areas not accessible or seen during the visual inspection or during the actual work on your home. Work on your home will be performed in a manner to prevent future mold growth. However, if there are existing conditions that are unseen or if, after the work is completed, situations within your home result in mold growth, we shall not be held responsible or liable.

Weatherization Activities

Notice: During weatherization activities, particularly when insulation is being blown into wall cavities and attics, insulation dust, other types of dust, and other particles may become airborne. Additionally, unforeseen circumstances may result in some insulation leaking through cracks into the home's living space. In those circumstances where insulation leaks into the living space, we will be responsible for clean-up (repairing damage and cleaning up the living area). Minor construction dust is inevitable at the end of any remodeling work. Construction dust clean-up will be the responsibility of the home owner/occupant.

Recommendation: It is recommended that people with the following health conditions be out of the house when insulation is being blown into the house and when spray foam is being installed: Asthma, emphysema, allergies and other respiratory conditions, pregnancy and any other serious health conditions such as decreased immune functions which might be aggravated by dust, other dust-like particles in the air, or fumes. Furthermore, it is also recommended that infants less than 12 months old should be out of the house when insulation is being blown and when spray foam is being installed. Persons who leave the house during the insulation process should remain outside the house for at least 30 minutes after completion of insulation activities.

Release and Waiver of Claims: I acknowledge by my signature below receipt of the information and recommendations set out above. I agree to notify the weatherization agency of any occupant health issues that may be affected by weatherization activities. Additionally, I agree on behalf of myself and any minor children or others for whom I am responsible, to hold the agency and its agents harmless from any claims, medical problems or personal injuries that may occur, develop or worsen in response to the weatherization activities. This waiver is for all damages, direct or indirect, that may relate to weatherization activities, including money lost by not being able to work, healthcare costs and pain or suffering.

I am aware the weatherization process may cause airborne particles, including dust or fumes, to be released in my home and airborne particles can aggravate health conditions. I have notified the weatherization provider of health issues that may be affected by weatherization. I have chosen to go forward with the weatherization process, accepting any and all risks of injury or damages.

I have carefully read this release and waiver and fully understand its contents. I am aware that this is a release of liability, and have signed it of my own free will.
